

# MetaSat

## Metadata for Open Satellite Missions

[Center for Astrophysics](#) + [Libre Space Foundation](#)

Working together to develop and prototype an open metadata schema to link data, software, and hardware from small satellite missions.

The project will help new communities participate in satellite missions, engender public engagement in space science, and fuel new research by improving access to scientific research artifacts and support their reuse.

This project has been made possible with funding from the [Alfred P. Sloan Foundation](#)
